How to Use Making Connections Lab Answers Effectively

Accessing Reliable Resources

To maximize learning, students should:

- Consult official NYS Regents exam guides and practice tests
- Use reputable online resources and study guides
- Review teacher-provided answer keys and explanations

Understanding the Structure of Answers

Effective answers typically:

- Address all parts of the question
- Include specific scientific terminology
- Provide clear explanations and reasoning
- Support responses with data or examples from the experiment

Practicing with Sample Questions

Practicing with sample questions and model answers helps students:

- Familiarize themselves with question formats
- Develop the ability to interpret experimental data
- Improve their scientific writing skills
- Build confidence for the actual exam

Sample Questions and Model Answers

Sample Question 1: Genetic Inheritance

Question:

A pea plant with purple flowers is crossed with a plant with white flowers. The offspring all have purple flowers. What can you conclude about the genetic relationship between these traits?

Model Answer:

The fact that all offspring have purple flowers suggests that purple flower color is dominant over white. The parent plant with purple flowers is likely homozygous dominant (PP) or heterozygous (Pp), but since all offspring are purple, it is most probable that the purple parent is homozygous dominant. The white-flowered parent is homozygous recessive (pp). Therefore, the cross is between PP x pp, producing all Pp offspring, which display purple flowers.

Sample Question 2: Environmental Impact on Organisms

Question:

In an experiment, a species of fish was kept in two different tanks: one with high oxygen levels and one with low oxygen levels. The fish in the low oxygen tank showed decreased activity. What is the likely reason for this observation?

Model Answer:

The decreased activity of fish in the low oxygen tank is likely due to oxygen deprivation, which impairs cellular respiration and energy production. Fish rely on oxygen for survival, and low oxygen levels can cause stress, reduced metabolic functions, and decreased activity. This demonstrates how environmental factors like oxygen availability directly affect organism behavior and health.
