Q2: What is the difference between ionic and covalent bonds?

Answer: Ionic bonds involve the transfer of electrons from one atom to another, forming charged ions that attract each other. Covalent bonds involve sharing electron pairs between atoms. Ionic bonds typically occur between metals and nonmetals, while covalent bonds are common between nonmetals.

Q3: How do you calculate the molar mass of a compound?

Answer: Add the atomic masses of all atoms in the molecular formula. For example, water (H_2O) has a molar mass of $(2 \times 1.008) + 16.00 = 18.016$ g/mol.

Q4: What is Le Châtelier's principle?

Answer: It states that if a dynamic equilibrium is disturbed by changing the concentration, temperature, or pressure, the system shifts to counteract the change and restore equilibrium.

Q5: How do you determine the limiting reactant in a chemical reaction?

Answer: Convert all reactants to moles, then compare the mole ratios from the balanced chemical equation. The reactant that produces the least amount of product is the limiting reactant.
