Sample Problem and Step-by-Step Solution

Problem Statement:

A particle slides along a parabolic path defined by $y = 4x^2$. If the particle passes through the point $(1, 4)$ with a velocity of 5 m/s directed along the tangent to the path at that point, determine the components of the velocity and acceleration at that point.

Solution Approach (Based on Meriam 6th Edition):

- Parameterize the path:

Express y as a function of x , i.e., $y = 4x^2$.

- Compute the derivatives:

$$\frac{dy}{dx} = 8x$$

- Calculate the tangent vector at $x=1$:

$$\text{At } x=1, \quad \frac{dy}{dx} = 8$$

- Determine the tangent direction vector:

$$\mathbf{T} = (1, \frac{dy}{dx}) = (1, 8)$$

- Find the velocity components:

Since the velocity is tangent to the path with magnitude 5 m/s,

$$v_x = v \cdot \frac{dx}{ds}, \quad v_y = v \cdot \frac{dy}{ds}$$

Using the chain rule,

$$ds = \sqrt{1 + (\frac{dy}{dx})^2} \cdot dx$$

$$\text{At } x=1,$$

$$\frac{ds}{dx} = \sqrt{1 + 8^2} = \sqrt{1 + 64} = \sqrt{65}$$

Therefore,

$$v_x = 5 \cdot \frac{1}{\sqrt{65}}$$

$$v_y = 5 \cdot \frac{8}{\sqrt{65}}$$

- Compute the acceleration components:

The acceleration components involve derivatives of velocity components, considering the curvature and change in direction.

For simplicity, approximate the tangential and normal components based on the curvature at the point, then resolve into x and y components.

Final Results:

$$- (v_x \approx 0.62, \text{m/s})$$

$$- (v_y \approx 4.91, \text{m/s})$$

- Acceleration components can be computed similarly, considering the curvature and the change in velocity direction.

Deep Dive: Sample Problem and Solution Approach

To illustrate, consider a typical problem from Meriam's Dynamics, 6th Edition:

Problem:

A wheel of mass 50 kg and radius 0.5 m rotates about a fixed horizontal axis. If it is subjected to a torque of 20 Nm, calculate its angular acceleration.

Solution Approach:

- Step 1: Sketch the wheel and label parameters.
- Step 2: Identify knowns:

Mass, $(m = 50, \text{kg})$

Radius, $(r = 0.5, \text{m})$

Torque, $(\tau = 20, \text{Nm})$

- Step 3: Determine the moment of inertia (I) for a solid disk:

$$(I = \frac{1}{2} m r^2)$$

$$(I = \frac{1}{2} \times 50 \times (0.5)^2 = 6.25, \text{kg} \cdot \text{m}^2)$$

- Step 4: Apply rotational form of Newton's second law:

$$\tau = I \alpha$$

$$\alpha = \frac{\tau}{I} = \frac{20}{6.25} = 3.2, \text{ rad/sec}^2$$

- Step 5: Confirm units and physical plausibility. The angular acceleration of 3.2 rad/sec² is reasonable given the torque.

This simple example underscores the importance of systematic analysis, which is reinforced through the detailed solutions provided in Meriam's manual.

- Time, $(t = 10)$ s

- Calculate acceleration:

$\{$

$$a = \frac{v - v_0}{t} = \frac{20 - 0}{10} = 2, \text{ m/s}^2$$

$\}$

- Calculate displacement:

$\{$

$$s = v_0 t + \frac{1}{2} a t^2 = 0 + \frac{1}{2} \times 2 \times (10)^2 = 100, \text{ m}$$

$\}$

Answer:

- The acceleration is 2 m/s².
- The car travels 100 meters during this time.

Question 2: Newton's Second Law

An object with mass 5 kg is pulled along a frictionless surface by a force of 20 N. What is its acceleration? How long does it take to reach a speed of 15 m/s?

Solution:

- Given:
- Mass, $(m = 5, \text{kg})$
- Force, $(F = 20, \text{N})$
- Final velocity, $(v = 15, \text{m/s})$

- Calculate acceleration:

$\{$

$$a = \frac{F}{m} = \frac{20}{5} = 4, \text{m/s}^2$$

$\}$

- Calculate time to reach 15 m/s:

$\{$

$$t = \frac{v - v_0}{a} = \frac{15 - 0}{4} = 3.75, \text{s}$$

$\}$

Answer:

- The acceleration is 4 m/s².
- It takes 3.75 seconds to reach 15 m/s.

Question 3: Conservation of Momentum

Two ice skaters, initially at rest, push off against each other. Skater A has a mass of 50 kg, and Skater B has a mass of 70 kg. If Skater A moves away with a velocity of 3 m/s, what is the velocity of Skater B after pushing off?

Solution:

- Initial momentum:

\[

$$p_{\text{initial}} = 0$$

\]

- Final momentum:

\[

$$p_{\text{A}} + p_{\text{B}} = 0$$

\]

\[

$$(m_{\text{A}})(v_{\text{A}}) + (m_{\text{B}})(v_{\text{B}}) = 0$$

\]

- Solve for (v_{B}) :

\[

$$v_{\text{B}} = - \frac{m_{\text{A}} v_{\text{A}}}{m_{\text{B}}} = - \frac{50 \times 3}{70} \approx -2.14, \text{ m/s}$$

\]

Answer:

- Skater B moves in the opposite direction at approximately 2.14 m/s.

Physics classroom 2009 answer key momentum

Physics Classroom 2009 Answer Key Momentum: A Comprehensive Guide

Understanding the principles of momentum is fundamental in physics education, and the **Physics Classroom 2009 answer key momentum** serves as an essential resource for students striving to grasp these concepts. Released in 2009, this answer key accompanies a series of instructional materials aimed at making complex topics accessible and engaging for high school and introductory college students. Whether you're reviewing for exams or seeking to deepen your understanding of momentum, this guide will provide detailed explanations, solutions, and insights to aid your learning journey.

Overview of Momentum in Physics

What Is Momentum?

Momentum, denoted as p , is a vector quantity defined as the product of an object's mass and its velocity:

- **Mathematically:** $p = m \times v$
- **Where:**
 - m = mass of the object (kg)
 - v = velocity of the object (m/s)

Momentum is conserved in isolated systems, meaning the total momentum before an interaction equals the total momentum after, provided no external forces act on the system.

Importance of Momentum in Physics

Momentum plays a crucial role in understanding collisions, explosions, and various motion-related phenomena. It helps physicists analyze how objects interact and transfer energy, making it an integral part of mechanics.

Context of the 2009 Physics Classroom Answer Key on Momentum

Educational Focus

The 2009 answer key is part of a broader curriculum designed to reinforce fundamental concepts through problem-solving exercises. The materials cover topics such as elastic and inelastic collisions, impulse, conservation laws, and real-world applications of momentum.

Target Audience

This answer key is tailored for high school students preparing for exams like the AP Physics or equivalent courses, as well as college freshmen seeking a solid foundation in mechanics.

Features of the 2009 Answer Key

- Step-by-step solutions to typical momentum problems
- Clear explanations of concepts and formulas
- Visual aids such as diagrams and vector representations
- Practice problems with detailed answer breakdowns

Key Concepts Covered in the 2009 Momentum Answer Key

1. Conservation of Momentum

The principle stating that in an isolated system, total momentum remains constant over time.

Mathematically:

$$m_1v_1 + m_2v_2 = m_1v_1' + m_2v_2'$$

where primed quantities denote post-collision velocities.

2. Types of Collisions

- **Elastic Collisions:** Both kinetic energy and momentum are conserved.
- **Inelastic Collisions:** Momentum is conserved, but kinetic energy is not necessarily conserved.
- **Perfectly Inelastic Collisions:** Objects stick together after collision.

3. Impulse and Change in Momentum

Impulse is the product of force and the time over which it acts, related to the change in momentum:

Impulse = Force $\times$ Time = $\Delta p = p_{\text{final}} - p_{\text{initial}}$

Analyzing Typical Problems from the 2009 Answer Key

Sample Problem 1: Colliding Billiard Balls

Problem: Two billiard balls of equal mass collide elastically. Ball A moves at 3 m/s, and ball B is stationary. Find their velocities after collision.

Solution Steps:

- Identify initial momenta:

- $p_{A_initial} = m \times 3 \text{ m/s}$

- $p_{B_initial} = 0$

- Apply conservation of momentum: $m \times 3 + 0 = m \times v_{A'} + m \times v_{B'}$

- Apply conservation of kinetic energy for elastic collision: $\frac{1}{2}m \times (3)^2 = \frac{1}{2}m \times (v_{A'})^2 + \frac{1}{2}m \times (v_{B'})^2$

- Solve the system of equations to find:

- $v_{A'} = 0 \text{ m/s}$

- $v_{B'} = 3 \text{ m/s}$

This demonstrates that the moving ball comes to rest, transferring its momentum to the stationary ball, which then moves at the initial velocity of the first.

Sample Problem 2: Inelastic Collision Between Vehicles

Problem: Two cars of masses 1000 kg and 1500 kg collide inelastically at velocities 20 m/s and -15 m/s, respectively. Find their common velocity after collision.

Solution Steps:

- Calculate initial momentum:

$$p_{\text{initial}} = (1000)(20) + (1500)(-15) = 20,000 - 22,500 = -2,500 \text{ kg}\cdot\text{m/s}$$

- Set the combined mass and velocity after collision:

$$(1000 + 1500) \times v_{\text{final}} = -2,500$$

- Solve for v_{final} :

$$v_{\text{final}} = -2,500 / 2500 = -1 \text{ m/s}$$

The negative sign indicates the combined vehicle moves in the direction of the initially slower vehicle.

Practical Applications of Momentum Principles

1. Safety Features in Vehicles

- Airbags and crumple zones absorb impulse, reducing force impact during collisions.
- Seat belts extend the time over which deceleration occurs, lowering the force experienced by occupants.

2. Sports and Athletics

- Understanding momentum helps in designing techniques for throws, hits, and collisions in sports like football, hockey, and car racing.

3. Spacecraft and Satellite Dynamics

- Momentum conservation is crucial for trajectory adjustments and collision avoidance in space missions.

Tips for Using the 2009 Answer Key Effectively

- **Review Concepts First:** Before diving into solutions, ensure you understand the underlying physics principles.
- **Practice Step-by-Step:** Follow the detailed solutions to develop problem-solving skills.
- **Use Diagrams:** Visual representations of forces and vectors aid comprehension.
- **Check Units and Sign Conventions:** Consistency in units and signs prevents errors.
- **Practice Variations:** Tackle different types of momentum problems to build versatility.

Conclusion

The **Physics Classroom 2009 answer key momentum** remains a valuable resource for mastering the core principles of momentum in physics. Its comprehensive solutions and clear explanations help students develop a robust understanding of how momentum operates in various scenarios, from simple collisions to complex real-world applications. By studying these solutions and practicing similar problems, learners can enhance their problem-solving skills, deepen their conceptual understanding, and excel in their physics coursework. Understanding Momentum: Fundamental Concepts

Before dissecting the answer key itself, it is essential to establish a foundational understanding of momentum and its role in physics.

Definition and Types of Momentum

Momentum, denoted as p , is a vector quantity defined as the product of an object's mass and its velocity:

$$- p = m \times v$$

where:

- m is the mass of the object,
- v is its velocity vector.

There are two primary types of momentum:

- Linear Momentum: The straightforward product for objects moving in a straight line.
- Angular Momentum: Describes rotational motion, less relevant in basic classroom contexts but vital in advanced physics.

Conservation of Momentum

One of the most vital principles associated with momentum is conservation:

- In an isolated system (no external forces), total momentum remains constant.

Mathematically:

- $p_{\text{initial}} = p_{\text{final}}$

This principle underpins the analysis of collisions and explosions, providing predictive power in complex interactions.

Impulsive Forces and Momentum Change

Sample Problem Analysis from the 2009 Key

Example: A 2 kg ball moving at 3 m/s collides elastically with a stationary 3 kg ball. What are their velocities after the collision?

Solution Outline:

- Apply conservation of momentum:
- Initial: $p_{\text{initial}} = (2 \text{ kg})(3 \text{ m/s}) + (3 \text{ kg})(0) = 6 \text{ kg}\cdot\text{m/s}$
- For elastic collisions, also conserve kinetic energy:
- $0.5 \times 2 \times (v_1)^2 + 0.5 \times 3 \times (v_2)^2 = \text{initial kinetic energy}$
- Solve the system of equations to find v_1 and v_2 after collision.

The answer key provides the detailed algebraic steps and final velocities, ensuring students can follow and replicate the process.
