Importance of G Code in Programming

G code, or GEneral code, is the language used to instruct CNC machines on how to perform various operations. For Amada turret punchers, G code commands define tool movements, punching sequences, and other operational parameters. Proper programming ensures efficient machining, reduces errors, and maintains safety standards.

Basics of G Code Programming for Amada Turret Punchers

Common G Codes Used

While G code syntax can vary slightly depending on the CNC system, the following are commonly encountered in Amada turret punching operations:

- **G00** - Rapid positioning: Moves the tool to a specified position quickly without machining.
- **G01** - Linear interpolation: Moves the tool in a straight line at a controlled feed rate for punching or cutting.
- **G02 / G03** - Circular interpolation clockwise/counterclockwise: For creating rounded cuts or punchouts.
- **G20 / G21** - Unit selection: G20 for inches, G21 for millimeters.
