Examples of Narrative Nursing Notes on PEG TUB Care

1. Routine Assessment and Maintenance

Date: MM/DD/YYYY

Patient's PEG site was inspected today during routine check. The insertion site appeared clean, with no signs of redness, swelling, or drainage. The stoma was stable, and the surrounding skin was intact. The dressing was clean and dry. The tube was secured properly to prevent accidental dislodgement. Patient tolerated the assessment well and reported no pain or discomfort during the inspection.

Interventions included gentle cleaning of the site with sterile saline, ensuring the securement device was snug but not constrictive, and reinforcing patient and caregiver education on daily site care.

2. Identifying and Managing Complications

Date: MM/DD/YYYY

During morning assessment, the patient exhibited slight redness and warmth around the PEG insertion site, with minimal serous drainage noted. The patient reported mild discomfort but no significant pain. No signs of purulent drainage or foul odor were present.

Assessment suggests early signs of localized infection. Nursing intervention included cleaning the site with antiseptic solution, applying a sterile dressing, and notifying the healthcare provider for further evaluation. The patient was advised to observe for increased redness, swelling, or drainage

and to report any worsening symptoms.

3. Troubleshooting Feeding Issues

Date: MM/DD/YYYY

Patient was receiving enteral feeding via PEG tube this morning. Noted that the feeding pump alarmed indicating occlusion. On inspection, the tube was found to be clamped or kinked. The nurse gently unclamped the tube and flushed it with 30 mL of warm water, restoring patency. The patient tolerated the feeding without complications.

Patient education was reinforced regarding proper feeding administration, avoiding excessive tension on the tube, and reporting any blockage or discomfort promptly.

4. Documentation of Patient Education

Date: MM/DD/YYYY

Provided comprehensive education to the patient and caregiver regarding PEG tube care, including signs of infection, proper cleaning techniques, and when to seek medical attention. Demonstrated dressing change and explained the importance of maintaining hygiene around the stoma. The patient expressed understanding and verbalized confidence in managing the PEG at home.

5. Post-Procedure or Post-Intervention Notes

Date: MM/DD/YYYY

Post-PEG insertion, the patient was monitored closely for signs of bleeding, pain, or infection. No adverse events noted. The insertion site was clean, dry, and without bleeding. Patient tolerated the procedure well and was scheduled for follow-up in 24 hours for site assessment.

Tips for Writing Effective Narrative Nursing Notes on PEG TUBS

Common Challenges and How to Document Them

Infection at the Insertion Site

Example Narrative:

On MM/DD/YYYY at 0900, upon inspection, redness and mild edema noted around the PEG insertion site, with minimal serous drainage. No foul odor detected. Patient reports slight tenderness. Intervention included cleaning with antiseptic solution, applying sterile dressing, and notifying the physician for potential antibiotic therapy. Patient educated on signs of worsening infection.

Tube Dislodgement

Example Narrative:

Patient's PEG tube was found to be partially dislodged upon morning assessment. The tube was loose but still in the stoma. Immediate action included stabilizing the tube, preventing further dislodgement, and notifying the surgical team. The patient was instructed to avoid pulling or tugging on the tube and to report any pain or difficulty with feeding.

Blockage or Occlusion

Example Narrative:

During feeding, the pump alarmed indicating occlusion. The nurse attempted flushing the tube with warm water, which was unsuccessful initially. The tube was gently massaged, and further flushing was performed successfully. The patient remained comfortable, and the incident was documented with follow-up instructions provided.

The skin surrounding the site is warm to touch, and the patient reports mild tenderness and discomfort. No systemic signs of infection such as fever or chills are noted at this time.

The PEG tube appears secure, with no visible dislodgement. I documented the findings and notified the physician for further evaluation. I removed the old dressing, cleaned the area with sterile saline,

and applied a clean, dry dressing. Antibiotic ointment was not applied without physician order.

Patient education included the importance of reporting increased redness, swelling, or discharge, and I scheduled a follow-up to monitor for progression of infection.

This morning, upon assessment, I noted that the PEG tube appears slightly dislodged, with the external bumper sitting higher than usual and the internal bumper not visible. The patient reports mild nausea and discomfort in the abdomen. No visible leakage from the site, but there is a small amount of clear gastric fluid around the tube.

I gently stabilized the tube to prevent further movement and checked for patency by aspirating a small amount of gastric contents, which was clear and minimal. I reassessed the site for signs of trauma or bleeding; none were present. I immediately notified the physician for potential repositioning or replacement.

Patient education included explaining the importance of not manipulating the tube independently and reporting any changes in tube position or discomfort. I documented the findings and actions taken thoroughly.

Follow-up plan: Await physician instructions for repositioning, continue monitoring for signs of leakage, and ensure patient comfort.

The patient tolerated the feeding well, with no reported discomfort or nausea.

Throughout the feeding, the patient remained comfortable and alert. I monitored for signs of aspiration, such as coughing or choking, and observed no abnormalities. Hydration status appears adequate, with moist mucous membranes and normal urine output.

I documented the feeding procedure, the amount administered, and the patient's response. Reinforced the importance of maintaining hydration and adhering to feeding schedules.

Follow-up: Continue to monitor for tolerance, residual volumes, and any adverse symptoms during future feedings.

Understanding MSRP and Closeouts in the Hot Tub Market

What is MSRP in the Context of Hot Tubs?

MSRP stands for Manufacturer's Suggested Retail Price. It is the price that the manufacturer recommends retailers sell the hot tub for, serving as a benchmark for pricing strategies across the industry. MSRP is often used to:

- Establish a standard price point in advertising
- Provide consumers with a reference for the value of a hot tub
- Facilitate negotiations and discounts

While the MSRP gives a sense of the product's value, it's important to note that retail prices often fluctuate based on promotions, inventory levels, and dealer discretion.

What Are Hot Tub Closeouts?

Closeouts refer to products that retailers are offering at significantly reduced prices to clear inventory. These items are often:

- Outdated models being phased out for newer versions
- Overstocked items that haven't sold at regular price
- Discontinued models to make room for newer inventory
- Slightly damaged or showroom models (although these are usually disclosed)

Closeouts provide a golden opportunity for buyers to purchase high-quality hot tubs at a fraction of the original MSRP. They serve as a win-win scenario: retailers clear space and cash flow, while consumers get premium features at discounted prices.
