- b) Kinetic energy converts to potential energy
- c) Electrical energy converts to mechanical energy
- d) Thermal energy converts to chemical energy

Answer: a) Potential energy converts to kinetic energy

Analysis:

This question assesses understanding of energy transformations in real-world contexts. The correct answer, option a, reflects the principle that as the coaster descends, its stored potential energy (from height) converts into kinetic energy (motion). Recognizing such patterns helps students answer similar questions confidently.

Implications for Study:

- Focus on energy transformation concepts
- Practice with real-world scenarios
- Understand the principles behind energy conservation

Limitations and Considerations When Using Released Items

While released item answers are invaluable resources, users should be aware of certain limitations:

- Not a Complete Practice Test: They only represent selected questions, not the entire exam.
- Potential Changes in Test Format: Future assessments may incorporate different question styles.
