Applying Mates for Proper Fit

Mates are constraints that define how parts are oriented and connected.

Common mate types include:

- **Coincident:** Aligns faces or edges to be on the same plane or line.
- **Parallel:** Keeps faces or axes parallel.
- **Perpendicular:** Ensures faces or axes are at right angles.
- **Concentric:** Aligns cylindrical features along the same axis.
- **Distance:** Sets a specified gap between two faces or edges.
- **Limit:** Restricts movement within a range.

Applying Mates Step-by-Step

- Select the first face or edge to mate.
- Hold Ctrl and select the second face or edge.
- Click on the desired mate type from the Mate PropertyManager.
