Common Review Questions and Answer Key

Question 1: What defines the biosphere?

Answer: The biosphere is the global sum of all ecosystems; it is the zone of life on Earth that includes all living organisms and their interactions with the physical environment (lithosphere, hydrosphere, atmosphere).

Question 2: How do autotrophs differ from heterotrophs?

Answer: Autotrophs can produce their own food using sunlight or inorganic chemicals through processes like photosynthesis or chemosynthesis. Heterotrophs rely on consuming other organisms

for energy and nutrients.

Question 3: Describe the levels of ecological organization from smallest to largest.

Answer: The levels are: individual, population, community, ecosystem, biosphere.

Question 4: What role do decomposers play in the biosphere?

Answer: Decomposers break down dead organic material, recycling nutrients back into the soil, water, and air, which supports plant growth and maintains ecological balance.

Question 5: Distinguish between a food chain and a food web.

Answer: A food chain is a linear sequence showing how energy passes from producer to consumer to decomposer. A food web is a network of interconnected food chains, illustrating the complex feeding relationships within an ecosystem.

Question 6: What is a biome, and how is it different from an ecosystem?

Answer: A biome is a large geographic area characterized by specific climate conditions and dominant vegetation (e.g., desert, rainforest). An ecosystem is a smaller unit that includes a community of organisms and their physical environment within a specific area.

Question 7: Explain the concept of energy flow in the biosphere.

Answer: Energy flows through the biosphere in a one-way stream, primarily from the Sun to producers (autotrophs), then to consumers and decomposers, with energy lost as heat at each transfer.

Question 8: What are the physical components that make up the biosphere?

Answer: The physical components include the lithosphere (land), hydrosphere (water), and atmosphere (air), which interact with living organisms to sustain life.
